

# MyClinic

## Clinic Management System

### Background:

**Sysnet** is a software product company engaged in large software solutions and innovative products. One such innovative product is **MyClinic**. It is a Clinic Management System meant for small Clinics and Polyclinics. It is built using Sysnet's **SpApp** (World's First Enterprise Appmaker) tool. MyClinic software is a Stable, Flexible, Scalable, Extensible and a Secure Product from Sysnet.

MyClinic works well for clinics run by a single-doctor or a Polyclinic with two or more specialist doctors. Using MyClinic, the doctor(s) can quickly record the treatment given to patients and generate OPD Bills and the Prescriptions. The consulting doctor's signature can be printed in the prescription. The doctor can also prepare and print a Medical Certificate for the patients treated by him/her.

### Salient Features:

MyClinic Software Product (Version 3.00) consists of the following features.

- **Patient:** Information regarding a patient is captured and his/her medical history is maintained. The doctor may view the Patient's complete history at one shot and make an appropriate prescription.
- **Doctors:** The contact details of the Consulting Doctors associated with the Clinic can be stored. Information such as "Days the doctor is available for consulting" may be stored.
- **Service:** One may define various Services like Consultancy, Vaccination, etc., that are rendered by the doctor(s) at the Clinic. The rate for these services may be maintained for billing purposes.
- **Appointments:** The receptionist books the appointments for patients. In case of a Polyclinic, all appointments for each doctor can be booked separately. The receptionist may print the list of appointments for each doctor and hand over.
- **Patient Registration:** The OPD Registration Number is generated automatically. In a Polyclinic, the Doctor to be consulted may be selected from Doctors List on screen. The OPD Bill is auto-calculated based on the Services availed by the patient.
- **Consultation and Services:** The Medical Services availed by patient such as Consultation, Dressing, Vaccination, etc. The service charges are automatically included in the OPD Bill. The bill can consist of more than one service.
- **Prescription:** The consulting doctor may generate the prescription in a well-defined format. The doctor mentions the medicine name, dosage & duration along with the time the medicine has to be taken. Specific instructions for each medicine can be given in 1 or 2 lines. The doctor's signature can be printed in the prescription.
- **Minor OT:** A separate Minor OT Bill can be generated with details of the service rendered. A note on the surgery can be mentioned by the doctor. Detailed prescription can be prepared and printed.
- **Medical Certificate:** A formal Medical Certificate can be generated if needed by the patient. The format is kept flexible to enable the doctor to enter his/her comments about the illness, period and the treatment given. The certificate may be printed either on the Clinic's letter head or on a standard A4 size paper with the clinic's name & address and logo.
- **Reports:** MyClinic helps the doctor generate many useful reports. The doctor can even generate a report showing details of Cash Receipts for any given period. It can be for a day or even a month. Reports can be printed or saved in Excel or Image formats. Many more useful reports available.
- MyClinic is very easy to use. No Database is required, No IT staff is required. No training is needed.
- MyClinic is offered as a Professional (Single PC), Enterprise (on Clinic's LAN) or as a Pen Version.
- The Pen Version is very handy to use the software either at clinic or at home, by the Doctor.
- The Pen Version is Ideal for Marketing and Promotional activities by Pharma companies.

### Summary:

MyClinic is a complete and easy-to-use Clinic Management System for clinics / polyclinics.
